

BOB PAUL

Bob started photography in High School and built his own darkroom in the garage. During high school and early college, he owned and used a variety of cameras including med format twin lens reflex Yashica and 2¼ X 3¼ Graflex. With the Graflex he used both roll and sheet film. He still owns a Miranda SLR 35mm, Rollei 35, and a Vivitar 35 SLR but he prefers to shoot digital exclusively. He started using digital in 1998, using a company-owned Kodak DCS 420 SLR and Photoshop 3.0. During his high school and early college years he processed all of his own B&W and slide film. During his 20 year Navy career he drifted away from photography, taking only occasional slide photos while letting his wife take over the photography responsibilities.

Bob spent my early years in Oakland Ca and moved to WA in 1995. He and his wife Barbara have been married for 36 years and have two sons. His oldest is in the navy, married and living in Florida. His youngest lives in Blain, WA is a geologist and works for a mining company. Bob currently works as an engineer for Northrop Grumman in which part of his responsibility is to take photos for technical manuals and for training presentations.

Bob serves as the club's Digital Director, and acts as the digital projectionist on projection nights. He also has made valuable contributions at club business meetings, has designed a club "business card", and actively provides digital support for and participation in club activities.
